INTRODUCTION

2010 saw the continuation and expansion of previous projects especially concerned with the futures of education, media, governance, and space, as well as new activities including the completion of a project with the Office of State Planning on enabling Hawaii to adapt to and thrive within global climate change and sea level rise. Another major activity was the work of various graduate students within the Department of Political Science and the Hawaii Research Center for Futures Studies, as well as within the College of Architecture, on presentations made at a meeting of the World Futures Studies Federation and the Global Higher Education Forum in Penang, Malaysia, in December 2011. Our ongoing work with Korea took a major step forward with a three-week workshop during the summer of 2011 for Korean Journalists, sponsored by the Samsung Press Foundation. The workshop will be conducted again during the summer of 2012. With funds obtained from our research and training activities we were able to help support nine graduate students and provide additional funding to six UHM faculty members.

Locally, we continued our "Campuses 2060" project--a joint activity with the University of Hawai'i at Mānoa (UHM) School of Architecture, College of Education, and the HRCFS in the Department of Political Science. Our focus this year was largely on analyzing, synthesizing, clarifying, and further developing work done since 2008 for presentation at a meeting of the World Futures Studies Federation and the Global Higher Education Form in Penang, Malaysia, in December 2011. We continued our series of talks, media presentations, publications, and other activities throughout the community about energy, environmental, economic, governmental, and interrelated issues facing Hawaii under the title, "The Unholy Trinity, Plus One".

We also continued our work with the Center for Global Nonkilling, making a presentation at an international workshop of the Center in October about progress towards the publication of a volume on "Futures of a Nonkilling World" as part of their multi-volume "Nonkilling World" series.

Nationally, the Center continues to work with several American colleges and universities interested in developing courses in futures studies. We also had repeated consultancies with the Institute for the Future of Menlo Park, California, the Association of Professional Futurists, and the Keystone Institute in Colorado.

Internationally the Center continues to work closely with the international space community, and with various Korean research institutes on a variety of futures-related projects. We conducted the first of what may be a series of Futures Workshops for Korean Journalists, funded by Samsung. A second workshop has been planned for Summer 2012.

Our work on futures of higher education with the Ministry of Higher Education of Romania, begun last year, continued with participation in two more workshops in Romania in 2011. Our work with the Finland Futures Research Centre, University of

Turku, on a project titled “Past and future of futures research” continues to move forward.

As an Affiliate Campus of the International Space University (ISU) in Strasbourg, France, we continued our teaching and research on many aspects of Space and Society. By compiling lectures given at ISU over the years, and supplemental research, we wrote a book on *Space and Society* that will be part of a series on *The Fundamentals of Space*, edited by Joe Pelton and to be published by Springer press in 2012. Other volumes in the series cover astrobiology, astronomy, rocketry and engineering, medicine, satellite applications, policy and law, business and management, and architecture and design.

The Manoa Journal of Fried and Half-Fried Ideas (about the future...) was originally published from 1993-1998 as a vehicle for sharing futures-oriented ideas that weren't quite ready for primetime, but deserving of broad discussion in the futures community. The journal ceased publication when the Internet became the preferred vehicle for such activities. However, in August 2011, University of Hawaii-Manoa political futures studies students decided to restart the publication. The *Fried Journal* contains both cutting edge ideas about the futures, from those that are well-grounded to those that may seem zany, and from trained futurists to complete novices. The student editors intend to create an original futures-oriented academic publication that is accessible and interesting to people from different backgrounds. The first issue was published in December 2011, and the editors are accepting work for the second issue scheduled for an April 2012 publication. The revival of the journal was spearheaded by a new PhD candidate in political futures studies, Adrane Raff Corwin. Students working with her on the journal include Aubrey Yee, Aaron Rosa, Sarah Nishioka (a UH undergraduate student), John Sweeney, and Emily Empel (who is a visiting graduate student from the Program on the Future, University of Houston). The *Fried Journal* can be viewed at www.friedjournal.com

BACKGROUND OF THE CENTER

The HRCFS was established by the Hawai‘i State Legislature in 1971 to collect and disseminate information about futures studies and to conduct futures research for public and private groups within the State, the region, and throughout the world (Chapter 304A-3253).

Locally, the HRCFS is administered by the UHM Department of Political Science. The HRCFS thus works closely with the Alternative Futures Graduate Option in the Department. The Alternative Futures Option, created in 1977, has produced scores of women and men who have gone on to become successful professional futures consultants in many fields, locally, nationally, and worldwide. The Alternative Futures Option was listed as Number 17 among the "100 Contributions" listed in celebration of the 100th Anniversary of the University of Hawai‘i (*Malamalama*, Vol. 33, No. 2. May 2008, p. 4).

One component of the Alternative Futures Option is a paid internship that many students experience with the Institute for Alternative Futures (IAF), in Alexandria, Virginia (one

of the oldest and most respected futures consulting firms in the world), with the HRCFS itself, or with some other futures consulting firm, such as the Long Now Foundation in California. Heather Frey interned at IAF in 2010, Scott Yim in 2011, and Il-Han Bae will in 2012.

This year, as always, we consulted with several local groups in government, business and the nonprofit sector about various futures-oriented issues.

The HRCFS also cooperates with the Program in Public Administration, the School of Architecture, the College of Education, and other University units as well as the Asian-Pacific Leadership Program of the East-West Center on applied futures-oriented projects in Hawai'i and throughout the Asia-Pacific region.

Nationally, the HRCFS is a major futures resource. The HRCFS was responsible, with IAF, for the concept and development of "judicial foresight"--incorporating futures studies into judicial administrative decision-making. This began with work done by the HRCFS with Chief Justice William Richardson and Court Administrator Lester Cingcade of the Hawai'i State Judiciary from the 1970s onward. The State Justice Institute, a U.S. federal agency for state judiciaries, made the category "Futures and the Courts" one of its major funding categories specifically because of work done with and through the HRCFS and the IAF. Consequently, the HRCFS has engaged in judicial foresight activities indirectly with all, and directly with ten, other U.S. state judiciaries, as well as with the U. S. federal judiciary, many national and state bar associations, and with several foreign judiciaries and law-related entities, primarily in the Asia-Pacific. In addition, the HRCFS consults with many other governmental units, universities, businesses, religious organizations, and nonprofit entities throughout North America.

Globally, the World Futures Studies Federation (WFSF), the premier world organization of groups and individuals conducting futures research at a professional level, chose the Center to house the WFSF Secretariat during the 1980s and early 90s, and awarded the HRCFS its highest honor for excellence in futures research in 1995. The Center continues to work closely with the WFSF and with the Association of Professional Futurists.

The Center has been an Affiliate Campus of the International Space University (ISU) of Strasbourg, France since 1996. As such, UH faculty and students participate in the Masters in Space Studies (MSS) program at the main campus in Strasbourg and the nine-week Space Session Program (SSP) that is held in different locations around the world (most recently, the University of West Australia, Adelaide, the University of Bremen, Germany; Federico Santa Maria Technical University, Valparaiso, Chile; Suranaree University of Technology, Nakhon Ratchasima, Thailand; Beihang University, Beijing, China; Universitat Politècnica de Catalunya, Barcelona; NASA Ames, California; and Graz University of Technology, Graz, Austria. In 2012, the SSP will be held at Florida Technical University, in Melbourne, Florida. Discussions are ongoing about the possibility of an SSP being held in Hawaii in the near future.

Selected ISU MSS students have come to the Mānoa campus for their Internship Program. University of Hawai‘i students also enjoy special privileges regarding admission and substantially reduced tuition at ISU, and several UH graduates have studied at ISU under this arrangement. HRCFS and ISU also cooperate in various research, training and outreach projects, most recently in researching and writing a definitive book on space in all its human and scientific aspects titled, *The Farthest Shore: A 21st Century Guide to Space* (Apogee Books, 2010). In 2012, Springer Press will publish, *Space and Society*, as part of a series of handbooks on various aspects of space science, policy, exploration and settlement.
